Unbound 7 Release

Version: 7.0.5536.0

PRNNumberUnbound-07-00-5536

Release Notes

Feb 23rd, 2019

Overview

The new Unbound 7 release highlights several new features including a redesigned commerce administrator experience that incorporates a series of new interfaces that leverage a high-performance interface technology framework. In addition to the enhanced user experience Commerce now provides for international and multi-market support to expand your internationally using Commerce Variants. We've also overhauled the Marketing contact management interfaces, provide for ADA compliance improvements in the Form Builder, offer Google AMP support for content pages, Elastic search for variant sites and more! This release also includes a series of bug fixes and performance improvements.

Distribution Media: N/A
Hardware Environment Required: N/A
Software Environment Required: Unbound v7.0.5536.0, .NET framework 4.6.2
Release limitations: N/A
Additional Remarks / Comment

New Features in this Release

New Commerce UI
We've made the commerce manager dashboard much more useful by aggregating all assets to provide you with a quick snapshot of the order, products, customers you have in your environment. It also provides informative views of top purchased products, low inventory when appropriate. In addition, we have overhauled many other interfaces throughout to improve the user experience and performance including the product catalog management, order management, customer management, coupons and promotions management. We've also overhauled the Marketing contact management and site settings interfaces.

Commerce International and Multi-Market Support
A major enhancement of the v7.0 release is the Commerce Variants support allowing your business to gain a competitive advantage and drive incremental revenue by expanding internationally. The new feature allows you to create a hierarchy of multiple local market websites with configurations for multi-lingual content, currency, pricing, taxation, shipping, fulfillment and more. We've also included bulk import localization support.

Accelerated Mobile Pages Support
We've added support for rendering Google AMP compliant HTML through ASP.Net MVC. This allows your site to serve up light-weight, mobile-friendly versions of your content pages for end users.

ADA Compliance
We have enhanced the form library to address ADA Compliance regulations.

Asset Reporting
We've added asset reporting for across your pages, images and file libraries to consolidate the assets in a filterable report, so you can keep an eye on aging content on your site.

Elastic Search – Variant Site Support
We've added variant site support for the Elastic Search provider allowing your enterprise of sites to be indexed and searchable with Elastic Search.

Hreflang relationship handling for SEO
For multi-lingual sites, our system can dynamically generate the hreflang metadata in order to inform the search engines of the related pages. Search engines like Google can help direct your end users to the most appropriate versions of your page by language or region by using the hreflang references.

Stripe Payment Provider Integration
We've added the popular Stripe payment provider to this release – expanding on our list of native payment providers. We've also updated our tokenization logic to directly send the credit card information to the gateway from the client-side while the token is passed to our servers. This tokenization logic has also been implemented for Cybersource and Authorize.net payment providers.

Issues Fixed in this Release

Zendesk Tickets

Bug Fixes

Product	Description
Content	Cache invalidation from different servers and applications will be performed using Redis pub-sub model. This allows for greater scalability and a more dynamic network topology.
Content	Enumerated Lead attributes used in lead forms when synced with SalesForce, the enumerated attribute values are synced to SalesForce as Guid instead of text. This has been resolved.
Content	301 Automatic redirects are now dynamically created when pages are moved.
Content	Form responses download issues have been fixed.
Content	Deleted workflows are shown on workflow management screens. Editing /deleting these workflows no longer throws server errors.
Commerce	Cart Applied Discount APIs have been updated to be consistent with Order Total Discount APIs.
Commerce	Broken RMA Links in returns email has been fixed.
Commerce	Taxation updates for calculating total tax
Commerce	Manual order cancellation with OnAccount payment leaves remaining balance on order details screen. This has been resolved.
Commerce	Hong Kong has been added as a country in the country drop down.
Commerce	PayPal non-USD currency support has been added to the product.
Commerce	Bulk order page to update shipping status has been fixed.
Core Template	Order templates have been updated to show correct shipped date on return review and return authorization screens.
Core Template	Issue with social share buttons not rendering on the site properly after being enabled has been resolved.
Elastic Search	Elastic search management screen pagination and display section issues are now resolved.
Marketing	Email processor to handle errors and avoid repeated sends on batch failures.
Marketing	Dynamic audience lists using the "Number of Orders" filter, the "Date Range" filter issue has been resolved.
Marketing	Merge token replacement issue in email campaigns is now resolved.
Marketing	Contact screen search now supports keyword filtering on first name, last name, and email address
Marketing	Abandoned cart audience list filter now excludes express customers.
Perceptive Search	Issues with file search notifications to add, remove, archive, delete has been resolved.
